ABSTRACT

There occur, under usual courses the offsprings develop with lot of aberrations as evident from the newly discovered xx-xy gender theory about one and a quarter century ago. Recently, after a new perfection of the original discovery many developments in human biology were brought in. The objective of this study was to bring an innovative childcare for developing a personality from zero to hero. The study takes stakes of cases which had taken huge stock in various religions since long past. Study sets extensive role of mothers beyond mere nine months; period child is reared in womb. The study identified setbacks in bio-factors which tend to revamp at later stage of growth creating intelligent personalities as well as bad personalities. Further, promotion of such good personalities was fostered by awards and discouragement of bad by sociological punishments. The psychological disorder has to be overcome by an appropriate psychological reminding punishment to such miscreants of extremely unpleasant activities. Thus, this study sets a new bio path for developing child from zero to hero, which becomes genetic personality development a first scientific visionary study.

Keywords: Childbirth; Childcare; Eminent Intelligent Personality; Growth Stages; Prismatic Balanced Family Gender

Introduction

After new perfection of the original discovery of xx-xy (female-male) gender theory, many developments in human biology were brought in. In the referred domain previous developments reached prismaticism in creating balanced gender in families. After reaching at this juncture, of prismaticism for developing balanced family, it became obvious pondering that what can be further possibility of bringing new development in human biology. At birth a child's mind organs get developed, but it has no thinking power, hence it can be considered as a situation of zero. How it grows and develops it can be made into a hero. One effort is made through apps, video, and presentations to tech pregnant women how to manifest better baby, Garbh Sanskar is taking form of a wing. [1], baby by choice and not by chance. The article presented details on Hindu Sanskar by spirituality citing case of and Abhimanu through software apps named Krishna coming through garbh sanskar, women can design their desire in the

womb itself. The mythological story of Arjun- Abhimnu, and devotee Prahlad who listened lord Vishnus chintings when he was in his mother's womb. The study cites cases of success stories and the entered in big business. The 3esson is divided into quarter. The app named Krishna Coming designer baby having Sanskar and intelligence has become a business module, getting popularized through workshops and seminars citing success stories and method of building desired baby by choice and not by chance. The program is divided in sections viz beej shuddhikaran, preconception, punernavan in first three months, then chanting sanskars and for intelligence through slokas, music and storytelling and depiction of preference of the baby character. In the second third month duration spiritual sansakar recited. The last quarter is devoted to yoga and exercise. Doctors find such mental practices and situations have good family bond resulting comfort and coherence in family. This app has become a new wing forming basis of yoga and vedic mantras. This sanskar baby involves family support where many events-based family functions are performed. The app has also

program for children up to age of 12 years., while business-oriented medication, yist lesson, yoga, meditation etc, but there is no insight of bio magnifications and what happens to the good and bad effect of shocks, which happen by any unknown reasons. Thus, the interest being brought up in the present study is well alive need full-fledged study on genetic theory, which will advance human biology, in general.

Objective of the present study was to find how further growth can make one from zero to hero. This study made process based situational study and arrived at meaningful conclusions in development of child from zero to hero. The study cites cases which had taken huge stakes in various religions since long past. It comes from that any initial shock on child at initial stage when one is mentally zero, will- have lot of implications on its future development of personality. Study identified initial shock defers child's mind diversion depending on available visionary exposition and adverse impact of surrounding environment. The well-known historically famous cases are cited as examples in support of further upcoming results and bio-factors responsible for such developments are identified and substantiated. Study sets extensive role of mothers beyond mere nine months; period child is reared in womb. This study provides a new dimension in sociological provocations in International Mother's Day. The study sets new steps and routes for celebrating International Mothers' Day using new perfection of original discovery of gender theory and beyond. The study first considers advances in prismatic gender, it takes all possible cares during the pregnancy, deliveries, care postnatal, and child care making one as an adult hero, something a different personality from one gets developed under usual life course processes. The study sets innovative wisdom for developing a genetic personality from zero to hero, which becomes the first scientific visionary bio study.

Materials and Method

Existing Scenario on Child and Mother Care

Child is created by mother, which involves process. Mothers showed tremendous concern on welfare of children as display of motherhood as evident from media reports on International Mothers' Day on May 15, 2023 [2]. This study brings developing focus and its appropriateness and efficacy. Worldwide mothers initiated campaigns on combating global warming and environmental pollution becoming injurious to health, adopt strategic urgent mitigating policies. It is giving feeling that real role of mothers in caring children has left right path, hence many worldly affairs cope in. There is need to bring childcare inducing genetic reason, extending role of mothers and making its international understanding value highly precious and effective.

Ancient Scenario on Mother and Childcare

There were plenty of miracles in childcares in the past. Efforts were made to bring well known cases so that readership gets quick comprehension and visualization of cited case studies. Historically

famous and well-known cases were cited as examples in support of further upcoming results.

Siddharth to Gautam Buddha: Siddhartha was born in 563 BC princely family in Lumbini in Nepal. He grew up in great personality and became Mahatma Gautam Buddha. His life course became a path setter for the new generation [3]. A new bio factor was identified and will be taken up in the subsequent path of the study.

Savitri Bai Phule Mahatma Jyotibarao Phule: Jyotiba Phule was a great thinker, social reformer, philosopher, editor, and revolutionary. Savitri Bai Phule, on the other hand, was illiterate before marriage, but Jyotiba Rao Phule taught her how to read and write. Later [4], Savitri Bai Phule became the first female teacher in the country, not just for the backward classes but for the entire nation. At that time, the condition of girls was very pitiful, and they were not even allowed to study or write. This personality brought a new era of bringing education in girl children, who became mothers a pillar in the development of the genetic theory. This bio factor becomes a catalyst [5] in childcare from zero to hero.

Albert Einstein-An Exemplary Genius Personality: Born on March 14, 1879, in ULM, Germany as first healthy child to Pauline and her husband Harmaan, creating a very delighted parents [6-8]. The father Harmaan was an electrical engineer at the time when electrical products were new and exciting area to work in. Next year the Harmaan family moved to Munic to team up with his brother Jacob to start makeup of electrical equipments. The child grew with his parent's given name Albert and became great scientist Albert Einstein.

A Girl with IQ More than Genius Einstein: Daily News Paper [9] presented a news of a girl having intelligence quotients (I.Q.) more than that of Albert Einstein. The details of such I. Q. will support identification and evidence in the coming study.

Advancement in the Domain of Development of Women and Child

This researcher brought new perfections in original discovery of xx-xy (gender theory) in 1905 [10], ie after one and a quarter century later, overcoming plenty aberrations and becoming scientific basis back people lose trust on such scientific advancement, and adopt back on believes based on different prevailing religions prayers. How this new perfection brings scientific advancement in human biology to come in resulted in bringing prismaticism in human biology [9].

New Bio-Factor in Childcare Shaping Future Personality

Deep case by case study showed a bio-factor which has strong influence on development of individual personality. This bio-factor is the level of pH of urine. This has several ranges which implicate mental growth making intelligent as well as a bad personality by process of biomagnification in the life course and making nature of individual personality. This aspect will be presented in the result part of study.

Acquisition of Data for Further Study

Well known cases of aberrations in gender balances leading to misbalanced families having social and economic variations are families and associated genetic disability, as well as ailments are brought in the study [11].

Results

There are plenty of aberrations in gender theory results. Well known cases of such aberrations are classified, and such groups are present in the following subsection.

Selected Case Study Having Misbalance in Family with Girl Children and No Male Child

Present well acquainted case known to the author. The case-by-case deep analysis was reviewed, and crucial factors identified. The misbalance in family occurs due to low pH (ie high acidity) of urine. This chemical dis balance occurs due to many female genders related problem of urinary tract. The period irregularity turns to bring defect in system add to the problems. Therefore, mothers are required to take pre-pregnancy medical advice from an expert doctor, which is usually done after conception of child. Such pre pregnancy medical advisory is reposted by this author other study [10] In this domain lack of scientific knowledge as well as failure of the expected results from the original theory reverted people seek God's blessings. The helplessness situation people accept in whichever type of gender takes birth. The new perfection [5] has reached to prismaticism of childbirth and make family become gende balanced. Education of girl children which become mothers in due course will be able to understand the process. Even in the most developed countries of world only 30 percent of parents plan pregnancy where nearly 24% deliver babies. The remaining 70- 76 % child borns in their natural process

of evolution. Therefore, this situation is not likely to be overcome in a short span of time. Pregnant mothers visit doctors for normal growth, which remains tagged to food and nutrition of mother and child. Nevertheless, the new perfection overcomes such limitations. Pre consultation over comes likely complexity of growth and delivery. Educated lots prefer to go for caesarean delivery, where both mother and child get needed care. The medical care facilities usually remain lacking and many mortalities of mother and child cannot be over ruled. Family life gets sad sailing and life course development with complications. Study could not make any study on visible ailments of mother and the girl children as result on inherent limitation and people avoid talking such ailments, as natural situation.

Aberrations in the XX-XY (Female-Male) Theory, Social and Family Health Having Only Male Children

Table 1 presents case study of well-acquainted family having only male children [2]. Cases reveal the special health situation of parents. The couple with one male child invariably father suffered baldness and occasional headache. In case of couples having two male children there occur plenty ailments in fathers as well mental disorder in mothers. Large no of cases in this category showed a variety of ailments in fathers as well as in mothers. Severity of headache and mental disorder were found to increase in couples with three sons. In contrast, the couple with four sons both parents suffered baldness and mental disorders. The social implications are different from those that existed during the 19th century when Jyotiba-Savitribai Phule were involved in overcoming problem then [3]. By that time there existed no scientific gender theory. This study will take account of new scientific advancement of gender xx-xy female-male theory [10,11]. As it was apparent, in births of females (Table 2), there also occurred aberrations in birth of male children (Table 1). Such implications will be taken up in clarification in the following part of manuscript.

Table 1: Misbalance in family having only male children.

One male and one female with natural developments producing only son						
S.No	Male	Female	Living standard	Offspring	Health of parents	Social implication
1	M21	F24	Normal	1 Son	Male had bald head	It becomes signal that the offspring will be Son
2	F22	F25	Normal	1 Son	Male had some mental disorder	It becomes signal that the offspring will be Son
Remarkable conclusion from the above case studies: Ailments on parents: Father suffer baldness and mental disorder						
3	M13	F16	Normal	2 Sons	Male with migraine	Needs ameliorative measures
4	M14	F17	Normal	2 Sons	Female suffered mental disorder	Needs ameliorative measure
5	M16	F19	Normal	2 sons	Male bald head, Female died at early age	Family could not provide continued mother care.
6	M17	F20	Normal	2 Sons	Female suffered severe disease	Needs measure to overcome disease
7	M18	F21	Normal	2 Sons	Male suffered season change disorder	Needs measure to overcome
8	M19	F22	Normal	2 Sons	Male suffered baldness	A prospecting impact indicator to follow.
9	M20	F23	Normal	2 Sons	Mail suffered with left hand paralysis	This is new fact found in this study
10	M21	F 24	Normal	2 Sons	Male had baldness	Confirming baldness

Remarkable conclusion from the above case studies: Ailments on parents: Father s suffer baldness, migranes and mental disorder and mothers suffer mental disorder even death at an early age. Any skeletal disability gets reflected in child gender development.						
11	M11	F14	Normal	3 Sons	Male had severe headache	Needs ameliorative measure
12	M12	F15	Excessive non-veg eating	3 Sons	Male with baldness	Covering head with gamchha turban
Ail Remarkable conclusion from the above case studies: ments on parents: Fathers suffer baldness as well as severe headache						
13	M15	F18	Normal	4 Sons	Father suffered baldness and mother suffered some mental isorder	Needs measure to overcome problem
Remarkable conclusion from the above case studies: Ailments on parents: father suffer baldness and mother suffer mental disorder						

Note: *Subscripts M and F are arbitrary. They merely signify different identification in array.

Table 2: Aberrations in xx-xy- (female-male) gender theory and resulting gender misbalanced families.

S.No	Genders		Other attributes			
	Male	Female	Living standard	Offsprings	Amelioration	Sociological situation
1	M4	F7	Normal	3 daughters	Non ameliorated	pondering situation
2	M6	F9	Normal	3 daughters	Non ameliorated	pondering situation
Ailments on parents: Un disclosed and difficult to notice						
3	M5	F8	Normal	4 daughters	Non ameliorated	pondering situation
Ailments on parents: Un disclosed and difficult to notice						
4	M7	F10	Normal	8 Daughters	Non ameliorated	pondering situations.
Ailments on parents: Un disclosed and difficult to notice						

Note: *Subscripts to M and F are arbitrary. They merely signify different identification in array.

Ancient Wisdoms

From Siddharth to Buddha: Coming to the bio-factor the life course study of long journey from prince Siddhartha to Gautam Buddha [3] was deeply studied to ascertain the bio-factor for taking lesson in bringing any prismaticism in child development cares. The

prince Siddharth s mother died nine days of his birth, when child has zero wisdom. This became a biological shock implicating the future life course of a prince, what to talk for gentry in general. As the prince grew from zero wisdom, with development of wisdom with growth of mind became curious to find many answers to know Table 3 presents the questions then and resulting answer scenario now.

Table 3: Self posed questions of worried Siddharth and their answer now.

S.No	Questions raised by Siddharth	Likely answer possible now	Reason	Remark
1	Budhaa kyo aatahai? Why one gets old?	This is life course	Natural process	This life course processes became curiosity. for developing power of hinking of growing mind of Siddharth.
2	Mritu Kyo aati hai? Why come death?	This is life course	Natural process under normal situation	
3	Ham mrityu ke baad kanha jaate hai? Where one goes after death?	This has been subject of pondering even now	Debatable under influence of various religions	
4	When we get birth then what we possess? What has one when he borns?	A child with mind with zero wisdom and thinking power	It grows with growing age	
5	Ham kahan se aate hain? From where we come?	Lack of knowledge of life course process.	Curiosity after the bio shock of absolute mother care.	
6	Sach kya hai? What is truth?	The truths were legend based	Pondering for child psychology	
7	Yeh duniya kyo maujood hai? Wa iska astitva kya hai? What is this world? And what is fact about its existence?	A child psychology curiosity	Developing wisdom became cusitive mind	

Savitri Bai Phule a Legendary Social Reformer: To break this tradition, Jyotiba Phule and Savitribai Phule established the first girls' school, named Balika Vidyalaya, in Pune on January 1, 1848, which was the first school for girls. Six girls were the first to enroll. In this way, they opened 18 schools for women, and Savitribai Phule also started widow remarriage and established an ashram for widows. Seeing the tendency of infanticide, Savitribai Phule established the first child protection home in 1888. Along with her husband, she prevented a Brahmin pregnant woman named Kashi Bai from committing suicide, and also adopted her illegitimate child Yashwant as her own son and educated him. Later, Yashwant became a famous doctor. Savitri bai Phule had made the prevention of untouchability an important part of her work. All campaigns of Savitribai Phule and overcoming atrocities, then led to development of prismaticism in human biology for bringing gender balanced families [5]. Subsequent scientific development of xx-xy (female-male) gender theory got discovered by Wilson and Stevens in 1905 [11]. But expected results got aberrated making people to lose trust, which was taken as pondering situation [12] Such results were brought in Tables 1 & 2.

Albert Einstein: Albert Einstein, the brilliant scientist, who is now every one's idea of an absolute genius, who had concluded that acceleration (speeding up) of an object such as machine bends time and space through which it travels, which provided new scientific basis of ecological changes at different locations in spatial and temporal position in globe. Elbert Einstein also said that people think that I am genius, but the fact is that I live with problem for longer time. This fact is taken up to explore and create reformation of educational systems that creates mandatory provision to remain in contact of syllabus and revision to produce genius generations [7,8]. The results of the study substantiated improvement of efficiency of educational systems, without further incurring extra burden on country's economy, development of genius gentry to bring several social capital and intellectual properties in different areas Emergence of many supporting developments in the journey from Siddharth to Gautham [4] need deep analysis. This part of the study will be taken up in the subsequent part of the present study under a separate section covering all three previously brought out bio-factors.

Analysis for New Bio-Factor

Previous sections have covered resulting situations of misbalance in genders of family, succeeding studies showed there are many genetic disorders which display genetic features in parents. This implies that the developing offsprings will have their next generations with varying magnification of bio-factors. Such-bio factors enhancements and depressions will bring different natures of personalities. To proceed further wisely selected cases of well-known personalities in different aspects were brought here to enable readers understand and comprehend situations of ready references. The bio-factors are brought here in the following section case by case descriptions, which were brought in section 5.3.

Hypothesis of New Bio Factor: Previous dealings and results enabled formulation of a new hypothesis of bio-factors which develop and bring nature of personalities. At birth when child is born under normal situations, all body organs including the brain get formed, but its thinking power is governed by mother care immediately after birth. Any setback during that tender growing stage hinders normal growth. It was also understood that any insufficiency in food and nutrition turns the growing child to follow growth with some kind of genetic diffect, resulting in genetic disability. Coming to a situation after the birth normal or with any kind of genetic disability, any kind of shock suppresses normal bio-factor growth. As wisdom grows, the growth gets deformed. At this juncture there become two routes of personality development viz forming bad vis a vis forming good personality. The deferred growth takes its form with added strength. At this time the further features grow as per scenario exposure coming to the groing child initially having zero strength of mind. This hypothesis is further substantiated by the exemplary cases citations and justifications. It also enabled fixing good features to developing personality becoming hero.

Bio-Factor in Developing Personality: From Siddharth to Gautam: As mind grew Siddhartha started thinking and self-posing questions and remained thinking about it with developing mind. He was not allowed to go out of palace, in mean time he was getting normal with that situation he ws allwed to go out for getting familiar with situations Siddhartha was a princely child. His mother was reported died after 9 days of birth when mind had almost zeo thinking power. There was a lack of intimate mother care. During that time Astrologers (Jotishi) predicted that Siddharth would be either a king or he will be a bhiksu (saint). He was retained in palace where he grew with searching answers to his self poed questions brought out in Table 3. Siddharth was allowed to move out where he perceived validating exposures intensifying his worry. In mean time he was married and a son was born named Rahul. Inspite of all luxurires and sufficiency of means of pleasant livng of life he left house and beame a bhikshu. With further growth he became a wisdom acquiring personality under the Bodh Gaya Tree, again in isolation medication. He started moving and preaching such answer, which became religion Buddhism, spreading in countries in east of Indi namely, Thiland, Indonesia, Koreass, China and Japan.

The foregoind details confirm the hypothesis of impact of shock, magnification of bio-factor and impact of subsequent exposures as mind grows after any kind of shock. This fact is further substantiated by exemplary research result from Safdarjung Hosptal in New Delhi [13], May 31 saved2023]. Children kept well by keeping mother in ICU providing Kangaroo mother care to childbirth before time and underweight could be saved from septisemia, a blood poisonous infection disease. This study on 3200 children showed that 37% of children could be saved from infection of sepsis. Children were given 16 h skin touching under Kangaroo mother care and given feeding proved healthy children.

Social Reformer- Savitri Bai Phule: Savitri Bai Phule was born in 1831, when there occurred lot of atrocities to women and girl children. had occurred when customs prevailed causing atrocities towards female children, there used to be lot death due to occurrence of different types of epidemics with lack of adequate medical care facilities. While males could get remarried, but female genders were debarred taking any part in family auspicious functions. Their heads were shaved and were debarred in many activities. This and many other facts compelled then child infanticides, all adverse situations changed Jyotiba Phule and Savitri Bai Phule minds for bringing social reformations. Excessive exposures of atrocities became reverting such social repulsive biofactor. This author brought a prismatic gender balancing new innovation [3].

Absolute Genius Albert Einstein: Albert Einstein was born in 1879 and had all luxurious life in Germany. The early life depicting literature presented decorated situation of early life days. Hence, it is difficult to find the identified factor of initial shock which is responsible for bringing later transformation of bio-factor viz initial shock. An available document established that Albert Einstein had excellent initial exposure conforming and doing and validating is hypothesis in long time remaining with problems. The existing backing and developing scenario and getting work opportunity in emerging branch of electronics, enabled him to remain in that field for long time. In his flourishing long life course he developed with confidence special theory in 1919 and general theory of relativity in at 36 year age. These figures and facts prove the extensive exposure at the time of growing wisdom bring lot enhancement in genius capability. Recently [9] a daily newspaper report quoted a case of a girl having intelligence quotient (IQ) more than Albert Einstein, passing master's degree in system management at the age of 11 years. It was reported that the girl had lost her memory power during her early part of childhood. This report supplements the part of hypothesis on shock or any setback getting enhanced when wisdom grows at later time of mind development. Thus, the entire aspect of hypothesis get fully established and substantiated.

Bio-Factor Leading to Development of Extremely Bad Heroism Personality: Previous elaborations and cited examples covered God personality. This section is bringing supplementation and substantiating cases which produce bad heroism personality. Such cases are plenty these days. As largely remains in prison and judicial custody. These are largely murders, thefts and extremely unpleasant anti-social undesirable activities. All such cases have some shocks at initial time when their minds had no thinking power, had mental depression as well as exposure of such bad surroundings and bad company. It would be unfair to cite such names. Readers will be sufficiently convinced to comprehend reports and cases appearing in day to audio visual and daily newsprint media. In New Delhi one lady murdered her colleagues on saying derogative word to her deceased father [14]. The lady having diverse from her husband and excessively drunk killed other women 32 year by poking knife. This type of brutal mind devel-

ops under some frustration leading to mental instability. This aspect of the hypothesis brought earlier is also fully established and substantiated. Recent report coming in daily newspaper that in America 1,22,000 people were killed by indiscriminate shooting by gun between January 2016 to December 2020 [5]. Law and order situations have become a subject of difference between opinions, justifying keeping gun is individual right for self-defense. As brought out earlier, this situation is developing due to mental disorder creating bad personality, which becomes befitting topic brought under this study denoting genetic solution to become ideal and permanent solution [15].

Newly Composed Module of Childcare Developing from Zero to Hero

Based on the foregoing details a new innovative childcare module was formulated for developing exemplary zero to hero personality. The genetic prismaticism overcomes genetic disorder enabling gender balanced families, sufficiency of mother care to meet oxygen and nutrition enhanced demand, peaceful comfortable environment, overcoming stressful situation by conducting cesarean delivery, that keeps continuing mother care touch with exposure of good and advancing scenario enable developing exemplary genius progeny. Any disorder defers such growths, but it is enhancing extra ability power of other organs making a remarkably bright heroism. Thus, this study covers a broad spectrum of child care bringing from zero to hero by genetic development. Kangaroo, continuing mother care from zero to childhood and leading to adulthood, bring exemplary personality, extending role of mother care more important than what has been thought over earlier. Contrary to this situation any initial shock tuning in mental depression with later enhanced bio-factor makes criminal background personality. Such bad scenarios have been developing world over, coming to notice, these days. Any shock defers growth and bad exposure creates excessively strengthened criminal attitude personalities bringing unpleasant antisocial activities creating plenty law and order problems for the country's world over.

Nurture of Exemplary Hero and Overcoming Bad Criminal Antisocial Activity Performers

The previous section covered different aspects of cares for building personalities from zero to hero. It is well known to set such ideal personality, some kind of esteem recognition is awarded to make an exemplary case. In the case of Albert Einstein, the award was a noble prize. In the other situation when there occurs some mental disorder there is custom of creating and giving mental vitamins. These days life course is full of challenges, which leads to mental imbalance, is thought over by sociologists [2023e]. Such sociological wisdom has reached the level to have gossip and some mend freshening talks as mental vitamins. The new perfection in gender theory and beyond deals this uncomfortable development of mental situation as mental disorder. The study reached the identification of a bio-factor which needs such mental misbalanced situation a control measure. Therefore, mere social thinking is not enough to deal with such a bad sce-

nario. It needs scientific justification for tackling such misbalanced situations. This study accomplished both the situations of identification of individuals with such mental misbalances and needed control by the most suitable sociological implicating punishments as well as some medication. These mental misbalances have many visible as well as behavioral indications, which become advancement in human biology.

New Curative Resolution for Overcoming the Extremities Devastated Spoiled Minds

Previous sections dealt with bio-factors, effect of any shock, deferment of growth and alter overcompensating build of mental growth making genius, diversion of minds and acquiring some specific skill. This fact was exemplified by tremendous enhancements of memory power of Soor Das Ji, who wrote Shrikrishn gatha. This section is devoted to how magnification grows in creating bad personality due to misbalance of mind. This situation is indicated by range of pH, viz urine pH. This ranges from 5- 12 safely can be considered 5 to 10. This pH will go on developing bad personality and the hero will behave differently in developing situations. This can be easily fixed by conducting tests of cases of pH of different types of crimes for which one is put in prison. The pH test range can be developed to make relation trend between pH and the type of bad personality. This information can become a guiding factor of keeping different categories of criminals of Criminal personalities in different categories. Such scenarios can be overcome by manoeuvring of pH by food and nutrition, especially when the magnification is in low range. There have been tremendous cases which take the form of men, meaning thereby what one sets doing on. For example in many murder cases criminal is seen continuously repeating his Crime, in extending order Such situation is found even in famous Tihar jail in Delhi, where one prisoner goes on killing the other prisoner.

This situation takes the form of severe crime. The many extreme minded bad personality people need punishment which should keep them reminding the bad activity done by him. In many countries death penalty is banned and life imprisonment is granted in one course of justice or the other. Further, life imprisonment is for only 14 years or so and the law-and-order situation being a state subject, criminals get bail and finally get free from such heinous crimes. The social punishment will serve two aspects; first make bad personality not to do any bad revengeful action after he is out of jail from one or other pretext. The second aspect is that he will get socially humiliated and on lookers will also take lesson remembering that one should be obstinate from doing such bad behavior for which he had been given the type of social punishment. The social punishment can be of type of making hole in ear plugs and shredding of ear or something of that like punishment. This bio-factor will be guiding factor in overcoming of in discriminate shooting in U.S.A, for which there exists no pragmatic control measure [5]. Such an identified person may not be given licence for owning the guns.

Discussion

Developing Interest in Human Biology

There had been widespread interest in developing children having good health ie free of any genetic disorder, which takes long time in overcoming such ailments and intelligence. Now there have been interest even in womb under the banner of Garbh Sanskaar, which has taken shape of business module in human biology, which takes stake of mythology of Arjun and Abhimanu [1]. This study derived on the basis of biological factors covering broad spectrum of human biology ranging since BC to AD including present time. Therefore, the research presented in the present study is on a scientific basis, which becomes a biological advancement.

The New Prismaticism in Human Biology

There has been development of bringing prismaticism in human biology enabling gender balanced family and overcoming lot of adversities on women and child [5]. Usually, people had been feeling such developments in gender or birth of child mere grace of God, for which people follow different paths induced by different ideologies and situation of minds. This scientific biological advancement is devoid of any cast and religion.

Developing Divisions and Wings in Development of Children

This study has displayed different stages viz preparatory gynecologist advise, which is corresponding to Beej Shuddhi in garbh Sanskar, Conception and taking care of food and nutrition in lieu of various many auspicious celebrations during first trimester, second trimester and third trimester covering nine month durations in mother's womb, which is main activity of growing gynecology departments in Government hospitals. Next stage is children care before adolescence and last developing adult. The biological factor guides how to rear a child from zero to hero, which is entirely a new insight in human biology. This entire domain covering a broad spectrum comes with how any shock leads to the development of both good physical, mental health and intelligence. Any unavoidable shock depressing normal growth during the process defers growth and that becomes a stint or extra intelligence, ability as well as development of bad personalities. This study opens new frontiers of child development from zero to hero in the domain of good personality. It becomes beyond control when such shock turns in to the development of a bad personality. The personality man oeuvre of good and bad personality becomes a subject in the following section of the study.

New Perfections in Personality

In the domain of scientific theory of gender development discovery came about one and quarter century ago [3,11]. But there occurred plenty aberrations, which became a pondering situation. Deep studies of well-known cases arrived coming up with new perfections and beyond [12]. This study is going beyond in this domain with ob-

jective of developing children from zero to hero, which is new aspect and bringing advancements in biological aspects.

New Promotion and Overcoming Good and Bad Personalities

The previous section covered the possibility of building from zero to hero good personalities as well due to shocks and bad depression and exposures to bad situation, development of bad personalities doing anti-social activities. Thus, it becomes imperative to review what to do to foster good personality as well as discourage or transform bad personality to good personality to moderate attitude of the undesirable antisocial activities. The senior citizen well acquainted with historical things in locality and elsewhere can play a good role of narrating to younger generation in form of telling legendary success stories and examples. One example of a highly intelligent personality is in the form of awards. The Noble prize is the highest esteem prize award for extra exemplary intelligence. Likewise for manoeuvring of such bad antisocial activities judiciary and imprisonment are universal provision of punishments. Although so long as the media keeps focussing continuously people become aware and think of restraining such bad activities. Largely, bad personalities complete the imparted punishment or come out of prison after obtaining bail, hardly become good personality, rather they start doing same previous antisocial activities again and again. Therefore, the stint of bio-magnified personalities needs some social punishment so that it becomes a live moving example of bad personality. People in general will point out and make bad humiliating situations for the bad personality. As death penalty is largely banned, social punishment in form of punching or making hole in ear or slashing may become mode of such social punishment. This is a new vision of suppressing the bad attitude of bad personalities, which will get refined by people's reactions in due course of time.

Economic Gain and Feasibility

The study on development of childcare for making from zero to hero is highly feasible as generation goes on moving from one to another without any definite cutoff line. Hence it will be highly feasible transformation in the community and society as well as for any country. Good personalities will make innovative intellectual properties which will make gain for the countries. Similarly, suppression of bad personalities will help save resources and develop bad to good personality. The crucial bio-factor needs case studies, which is beyond scope and feasibility of the present study.

Conclusion

The study fixed bio-factor drawn from long time human biology by deep studies of life courses with respect to health and intelligence. It came to realization that any set back during early stage of zero to hero development defers growth for some years and gets further revamped by the factor of biomagnifications. Mother cares much beyond ie mere understood for nine months in womb, is needed for developing good personality, builds strong bond for International

Mother Day celebrations. Such growth process creates extra intelligence for good hero vis a vis bad personality creating antisocial activities, which become problem of widespread nature. Study comes up with further fostering of good personalities as well as discouraging the bad personalities. The identified bio-factor has been established and substantiated in the study, which opens new frontiers in human biology for developing childcare from zero to hero.

Declaration of No Conflict of Interest of Authorship

It is declared that there is no clash of authorship.

Acknowledgement

The author duly acknowledged thankfulness for making use of references cited to support the statements made in the study.
